

Installation and Setup for Windows (Updated Versions)

Requirements

- Windows 10/11 (64-bit)
 - WSL2 enabled
 - Ubuntu installed
-

WSL Installation

1. Open **PowerShell as Administrator**
2. Run:

```
wsl --install
```

3. Restart your computer.
4. After restart, create your Ubuntu username and password.
5. Verify WSL:

```
wsl --list --verbose
```

VSCode Installation

Install Latest VSCode

Download from:

[Visual Studio Code](#)

Install Extensions

Motoko Extension

[Motoko VSCode Extension](#)

Remote WSL Extension

[Remote WSL Extension](#)

Homebrew Installation

Open Ubuntu terminal and run:

```
/bin/bash -c "$(curl -fsSL  
https://raw.githubusercontent.com/Homebrew/install/HEAD/install.sh)"
```

Install dependencies:

```
sudo apt-get install build-essential
```

Verify brew:

```
brew --version
```

Node.js Installation (Updated)

Instead of old Node 16, install the latest LTS version:

```
brew install node
```

Check version:

```
node -version
```

If needed:

```
brew link node
```

DFX Installation (Updated)

Instead of:

```
DFX_VERSION=0.9.3
```

Install the latest stable DFX:

```
sh -ci "$(curl -fsSL https://internetcomputer.org/install.sh)"
```

Check version:

```
dfx --version
```

Add DFX to PATH

If needed:

```
export PATH="$PATH:$HOME/bin"
```

Then verify:

```
echo "${PATH//:/$'\n'}"
```

Create Your First Internet Computer Project

Create projects folder:

```
mkdir ic-projects
```

Enter folder:

```
cd ic-projects
```

Create new project:

```
dfx new hello
```

Open folder in Windows Explorer:

```
explorer.exe .
```

Run and Deploy

Start local replica:

```
dfx start
```

Open another terminal and deploy:

```
dfx deploy
```

Run frontend:

```
npm start
```

Open browser:

```
http://localhost:8080
```

Important Notes

- Older tutorials use:
 - Node 16
 - DFX 0.9.3
- Newer Internet Computer projects work better with:
 - Latest Node LTS
 - Latest DFX SDK
- If you get webpack or dependency errors, run:

```
npm install
```

or:

```
npm update
```
